

Enkitec uses InstantOn rapid deployment to implement Oracle Real Application Clusters at lightning speed.

In a world where businesses operate 24/7/365, uptime is of paramount importance. And nowhere within a company's IT infrastructure is uptime more critical than at the database level. For example, if a database that's part of an LDAP server goes down, users cannot log in to the system – greatly disrupting both internal and external business practices. Additionally, the need for real-time information access can add greater strain to databases and servers not designed for such performance. That's why you need the reliable power of Oracle Real Application Clusters implemented by Enkitec.

enkitec
ORACLE®

Reduce risk. Increase power.

Oracle Real Application Clusters (Oracle RAC) give you the access and reliability you need for superior database performance. With Oracle RAC, a cluster of servers can house a single database, providing unmatched scalability and fault tolerance. All with no application changes necessary. Additional benefits of Oracle RAC implementation include:

- ▶ Creation of a highly available Oracle database environment
- ▶ 24/7 continuous uptime for database applications mitigates risk
- ▶ Flexibility to utilize the same data set for multiple purposes (OLTP, reporting, fail over, etc)
- ▶ Performance that runs faster than the fastest mainframe
- ▶ Enables rolling upgrades and patches
- ▶ High availability across any platform that supports clustering
- ▶ On-demand, incremental scalability – expand capacity just by adding new servers to the cluster
- ▶ Lower hardware costs by using options such as Intel-based servers and blade-based configurations
- ▶ Transparent to existing applications
- ▶ Oracle RAC is the foundation for grid computing

Experience RAC in record time.

Enkitec's InstantOn deployment services can roll out a fully functional Oracle RAC setup in only two weeks for just \$15,000. That means in 10 business days, your company can be enjoying faster database performance with virtually zero risk, without interrupting your current workflow. Upon deployment, a team of two Enkitec experts will deliver the following:

- ▶ Installation and configuration of a two-node RAC database on the Oracle or Red Hat Linux operating system
- ▶ ASM installation and configuration
- ▶ Configuration of failover/load balancing at the database level (based on your needs)
- ▶ Documentation of the architecture
- ▶ Knowledge transfer to enable autonomous management via grid control

It only takes two weeks to fully implement an Oracle RAC system and give your company unmatched database performance and reliability. That's the combined power of Oracle and Enkitec.

The Enkitec difference.

Enkitec is a Dallas-based information technology services firm specializing in Oracle. Our database consultants average 15 years of hands-on Oracle experience, making them some of the most knowledgeable Oracle experts in the country. We offer services in Oracle Database Administration, Oracle Application Development and our unique On Call Service – an innovative offering that provides remote services for Oracle Systems. With a rare mix of development and database administration expertise, Enkitec has the ability to step into the largest, most complex environments and instantly make an impact.
